The Arizona and Nevada departments of transportation are working together on the two-year Interstate 11 (I-11) and Intermountain West Corridor Study (Corridor) that includes detailed corridor planning of a possible high priority Interstate link between Phoenix and Las Vegas (the I-11 portion), and high-level visioning for potentially extending the Corridor north to Canada and south to Mexico. Congress recognized the importance of the portion of the Corridor between Phoenix and Las Vegas and designated it as future I-11 in the recent transportation authorization bill, Moving Ahead for Progress in the 21st Century Act (MAP-21).

As part of the study, interested public agencies, non-profit organizations and private interests groups are invited to participate in a Stakeholder Partners group that will be asked to provide data and other input, and to share their opinions and ideas on decision points throughout the process. As part of this effort, Stakeholder Partners were invited to participate in a series of meetings for Phase 3 of the project. In October, the third meeting series occurred to review the results of the Level 1 Screening of alternatives. Five meetings were held throughout the study area, each beginning at 2 p.m. MST/PDT: Tucson, Arizona for the Southern Arizona Future Connectivity Corridor; Avondale, Arizona for the Phoenix Metropolitan Priority Corridor Segment; Kingman, Arizona for the Northern Arizona Priority Corridor Segment; Las Vegas, Nevada for the Las Vegas Priority Corridor Segment; and Carson City, Nevada for the Nevada and Beyond Future Connectivity Corridor. Additionally, individuals could call-in and log-on to participate in a live webinar for each of the five meetings. A total of 166 individuals signed in and participated in this series. The following report summarizes the results of these meetings.

The comments presented in this report represent input from Stakeholder Partners that participated and will be reviewed and considered by the study team.
The purpose of this series of meetings was to receive feedback from Stakeholder Partners regarding the Level 1 Screening of alternatives. Participants were provided access to the PowerPoint presentation prior to the meetings.

The meeting was initiated by a detailed, narrated PowerPoint presentation viewed on location and online. Project team members provided a review of the segment universe of alternatives (see Figure 1), the evaluation process and the results of the Level 1 Screening of those segment alternatives. Attendees were invited to provide feedback relative to the Screening.

Figure 1: Revised Universe of Alternatives Evaluated in Level 1 Screening
Phoenix Metropolitan Area Meeting Summary

October 8, 2013; 2 p.m. PDT/MST
Avondale City Council Chambers
11465 W. Civic Center Dr.
Avondale, AZ

Meeting Feedback
Following a brief PowerPoint presentation, project co-manager Mike Kies led participants in a facilitated dialogue. The following feedback was provided by participants as part of that discussion.

General Questions and Comments

- It appears that this study is only looking at roadways. What about alternate modes? This study is looking at the possibility of the Corridor being multimodal (e.g., highway, railroad, major utility). This first level of analysis looked at the opportunity to accommodate multiple modes in one corridor footprint; the next level will delve into how different multimodal options (passenger rail, freight rail, major utilities, passenger and freight on roadways, etc.) can be accommodated, and conduct travel demand projections to inform where different modes are most appropriate.
- Is there the possibility that one alternative could actually split into different routes that utilize different modes (but generally travel in the same direction)? Absolutely. Exploring multimodal routing will be a result of the Level 2 analysis, and that is why the corridor footprints under consideration are so large.
- None of the alternative maps show the MCDOT parkway corridors.
- Is this study process trying to get to one preferred alternative? This study is following the Planning and Environmental Linkages (PEL) process, which will feed project elements into the federal environmental clearance process (NEPA). As part of PEL, the study team will recommend all feasible alternatives. This could include one or more corridors.
- Instead of only identifying major constraints, this study should identify opportunities for environmental mitigation and provide a menu of mitigation options. AGFD and The Nature Conservancy are working together to provide the team such options.
- How can broader environmental health be assessed? For example, looking at the balance of economic health, environmental health, and quality of life. A combination of the factors in the PEL and NEPA processes, as well as the Business Case, are designed to do this.

Level 1 Screening Question and Comments

- Please consider a modification to Alternative MM: Stay on SR-85 to SR-30 west, then transition to the proposed Hassayampa Freeway to the north. This avoids an environmentally-sensitive area surrounding the Buckeye Hills.
- Look at a modification to Alternative LL to respond to the placement of Pinal County regional parks.
- The Yuma alternatives can really be seen as more supportive to California, not as supportive to the Arizona economy.
- Why are any segments of I-10 used, if the whole interstate will eventually be congested? Generally, I-10 is utilized west of the Phoenix metropolitan area, where severe congestion is not anticipated. For alternatives that traverse the metropolitan area, using an existing interstate highway provides a better option than proposing a new high-capacity facility through the dense core. These alternatives, however, have not been recommended to move forward for various
reasons, including projected congestion and the fact that most of these corridors are at a “build out” condition or will be there within the next 10-15 years.

- Why did alternative alignments through the Hassayampa Valley get straightened out between I-10 and US-93 (versus earlier maps)? This segment requires additional consultation with various stakeholders regarding a planned park area, and as a result has been simplified graphically until these issues are resolved.

**Level 2 Evaluation Criteria Questions and Feedback**

- Are we weighting the Tier 2 analysis? No, weights will not be applied to specific evaluation criteria.

- In the Tier 2 evaluation, consider evaluating all the segments north of I-10 and south of I-10 separately. There may be major constraints that require a hybrid combination of alternative alignments north and south of I-10. We are planning to evaluate each numbered segment separately as a part of the Tier 2 analysis to more narrowly identify the constraint areas and better understand how to refine the preferred alternative(s).

- The I-11 and Intermountain West Corridor has a lot of renewable energy transmission (solar) potential that can be quantitatively assessed to determine eligible acres for renewable energy development. Consider incorporating that into the Level 2 evaluation.

- An “area of critical environmental concern” is quite a detailed evaluation measure. Are you looking at identifying other means of environmental measurement? The team will be holding an environmental stakeholder meeting in November to coordinate on data availability relative to the Level 2 analysis.

- Consider how to best evaluate environmental and economic development impacts of induced and cumulative development – need to understand the impact on each other, not just independently.
Phoenix Metropolitan Area Webinar Meeting Summary

October 8, 2013; 2 p.m. PDT/MST
Meeting conducted via Live Meeting and teleconference

Meeting Feedback
Following a brief PowerPoint presentation, team member Dan Andersen led participants in a facilitated dialogue. The following feedback was provided by participants as part of that discussion.

General Questions and Comments
- Andrew Laurenzi, Archaeology Southwest: I see there are three priority segments and two connectivity segments being studied; are there different levels of planning occurring as part of this study? Yes. A two-phased, more detailed analysis will occur of the Congressionally-designated portion of a future I-11: the portion that connects Phoenix and Las Vegas. Because a future I-11 could have impacts beyond the two metropolitan areas, we are conducting an initial, single-level screening to produce future study recommendations for those connectivity areas.
- Andrew Laurenzi, Archaeology Southwest: What are the boundaries for the priority corridor segments? Priority segment #1 covers the greater Phoenix Metropolitan Area; priority segment #2 covers the corridor between the Phoenix and Las Vegas metropolitan areas; and priority segment #3 covers the greater Las Vegas Metropolitan Area.
- Andrew Laurenzi, Archaeology Southwest: Does the segment that connects I-10 to SR 85 on alternative G align with Maricopa County’s proposed Hidden Valley Parkway? The alternative reflected is a component of the Maricopa Association of Government’s I-10/Hassayampa Valley Transportation Framework Study, which recommended the need for both the freeway and the parkway, as different corridors.
- Andrew Laurenzi, Archaeology Southwest: To what extent are cultural resources considered as part of your environmental sustainability criteria? This is an initial corridor study, and while this is not a NEPA study, we will be conducting high-level environmental analysis of available data. Future studies would include a more detailed assessment of environmental impacts.
- Andrew Laurenzi, Archaeology Southwest: How defined will alternatives be in future studies? The results of this study will be used to inform the more detailed, NEPA-necessitated study of alternatives; depending on the Level 2 Screening, this could include a distinct set of corridors or include specific alignments within a corridor. This study will document potential constraints of the alternatives.
- Andrew Laurenzi, Archaeology Southwest: In conjunction with cultural resource specialists throughout the state, we are currently identifying “cultural hot spots”; we would be pleased to share this information with the study team.

Level 1 Screening Questions and Comments
- Andrew Laurenzi, Archaeology Southwest: I would recommend that you carefully evaluate whether the Hidden Valley Parkway and a proposed I-11 alternative could serve the same purpose as there is limited available land but high right of way demand (for purposes of transportation and various utility demands). You make a good point; MAG and the county are stakeholders in this process. As of right now, however, the parkways aren’t planned to accommodate the capacity of a major trade corridor as defined for the future I-11.
- Andrew Laurenzi, Archaeology Southwest: As someone who travels a lot, I observe little traffic on I-8 between SR 85 and Casa Grande; it would be an oversight to not seriously consider this...
existing infrastructure as an alternative to incurring the expense to build redundant infrastructure. Traffic analysis and high-level travel demand modeling will be conducted to assist in the evaluation of these corridors.

- Doug Hansen, Pinal County: Based on the earlier conversation, I'm confused—is the Hassayampa Freeway (as proposed in the I-8 & I-10/Hidden Valley Transportation Framework Study) still being considered as a freeway facility or as a parkway? **Yes, the proposed Hassayampa Freeway facility is still being recommended as a freeway facility. The Hidden and Hassayampa studies also identified a series of parkways that were in the vicinity of the proposed Hassayampa Freeway.**

- Doug Hansen, Pinal County: As part of our East-West study, we’ve evaluated connectivity to and with a future I-11 that, among other things, indicate potential constraints of a corridor to the north and west of Casa Grande; we can share the results of our study with the study team.

**Level 2 Evaluation Criteria Questions and Feedback**

- Jim Dickey, Arizona Transit Association: When considering multimodal potential, how do the criteria evaluate these proposed corridors against current rail infrastructure? Does the alignment that was informed by the I-10/Hassayampa Valley Transportation Framework Study (referenced earlier) assume a combined highway/rail corridor as was recommended in that study? **In Level 2 Screening, we will be exploring whether rail currently exists within our alternative alignments, whether new rail infrastructure could be accommodated within the same corridor, or if a new rail infrastructure could provide a similar connection, but perhaps in a parallel the corridor. Yes; the rail corridor as proposed in MAG’s transportation framework studies is assumed to share the same segment footprint for purposes of this study.**
Northern Arizona Meeting Summary

October 9, 2013; 2 p.m. PDT/MST
Mohave County Public Works, Turquoise Room
3715 Sunshine Dr.
Kingman, AZ

Meeting Feedback
Following a brief PowerPoint presentation, Mike Kies led participants in a facilitated dialogue. The following feedback was provided by participants as part of that discussion.

General Questions and Comments
- Will routes around Wickenburg be considered? The existing US 93 corridor and a western bypass are being considered, however, at the level of detail this study is considering, we might not be able to make a recommendation without a full NEPA study.
- Are there different design criteria for passenger versus freight rail? Yes. Freight rail has 1.5% maximum grades (2% for short distances). Some high-speed rail has grade rates in the 3 to 4% range. By comparison, interstates usually have a maximum grade rate of 6%.
- Is there a need for passenger rail between Phoenix and Las Vegas? FRA is studying that; we are waiting for their draft report.
- Have you considered the effects of an expanded Port of Guaymas? Yes. That is briefly addressed in the Corridor Justification Report.
- Will you create typical sections to determine the footprint of various segments? Yes; they will be developed for the Level 2 analysis.

Level 1 Screening Questions and Comments
- Would Alternative UU use the new West Kingman TI? The TI is being planned and designed to freeway standards and will be a part of any future I-11 plans.
- Alternative UU has significant environmental concerns.
- Alternative UU provides better access to economic activity centers in the Lake Havasu area, in addition to the industrial/intermodal district south of Kingman.
- Alternative UU, over the Chicken Springs pass, is not conducive to rail—grades are too steep.
- Alternative Q makes the most sense.
- The grades on SR 68 are bad between Golden Valley and Bullhead City. There were lots of truck related crashes when trucks were not allowed over the Hoover Dam.
Northern Arizona Webinar Meeting Summary

October 9, 2013; 2 p.m. PDT/MST
Meeting conducted via Live Meeting and teleconference

Meeting Feedback
Following a brief PowerPoint presentation, team member Audra Koester Thomas led participants in a facilitated dialogue. The following feedback was provided by participants as part of that discussion.

General Questions and Comments
- Lisa McCabe, Bullhead Regional Economic Development Authority: Regarding alternative UU, after traversing south of Kingman/I-40 to Chicken Springs Road, where does the alternative then connect? The alternative traverses south on I-40 to approximately Proving Ground Road, connecting to Alamo Road south to Chicken Springs Road, east to US 93 near Wickiup. The exact alignment would vary depending on terrain, land use and other factors.
- Scott Higginson, CAN-DO Coalition: What percentage of the US 93 roadway improvements have been made to Interstate standards (excluding interchanges, access management, etc.)? It's difficult to answer that question; while US 93 will be a divided, four lane roadway, the facility in whole is not built to Interstate standards.
- David Wessel, FMPO: A recent political cartoon showed the rising economic tides now raising only yachts. Seems like the I-11 yacht is Phoenix. Makes looking at statewide economic influences as important. When you run the model this is the chance to look at impacts to I-17. Yes we want it to operate effectively. No, we don't want to see traffic levels decline as a result of I-11.

Level 1 Screening Questions and Comments
- Scott Sprague, Arizona Game and Fish Department: When I attended the meeting yesterday in Avondale, I was under the impression that the economic development criteria was measured based on existing development plans and not the potential for development; are their existing development plans supporting alternative UU? We will have to get back to you regarding this question. [NOTE: According to Mohave County, development plans do exist; details have been provided to the study team.]
- Lisa McCabe, Bullhead Regional Economic Development Authority: Per alternative UU, there is a lot of economic development potential in the Alamo Road/Chicken Springs Road area.
- Scott Higginson, CAN-DO Coalition: Using the Chicken Springs Road alignment would require entirely new infrastructure compared to utilizing US 93, where important improvements are already being made.
Southern Arizona and Beyond Meeting Summary

October 10, 2013; 2 p.m. PDT/MST
Albert J. Garcia Auditorium
Pascua Yaqui Reservation
7777 S. Camino Huivism
Tucson, AZ

Meeting Feedback
Following a brief PowerPoint presentation, project co-manager Mike Kies led participants in a facilitated dialogue. The following feedback was provided by participants as part of that discussion.

General Questions and Comments

- Why is double decking I-10 not being considered? This solution could save taxpayers money by double decking rather than creating an alternative through the Avra Valley. At this phase of study, we are looking to make broad corridor connections. The specific manner of implementation will be explored in a more detailed follow-on study.

- Isn’t there an ongoing study of implementing light rail transit between Phoenix and Tucson, and would that help relieve congestion issues on I-10? There is an ongoing study exploring intercity passenger rail between Phoenix and Tucson. Such a recommendation will feed into the next phase of this study as a potential element of the multimodal component of an I-11 and Intermountain West Corridor, and will likely provide some future travel demand capacity.

- Would an EIS explore all reasonable alternatives through and around Tucson? Yes. And that is the logical next step in the process.

- What happens next? Will there be a more detailed planning effort with local partners, exploring options within “Alternative C”? When would that occur? Yes, the process outlined is correct. The timeline is unsure due to an undefined funding source for the follow-on study. ADOT would like to initiate such a study as soon as possible with local partners such as Pima County, Tucson, Sahuarita, tribal communities, etc., after this study is complete next summer.

- Are you coordinating with government agencies in Mexico? ADOT is in regular communication with Mexican government agencies regarding current projects via the Arizona-Mexico Commission. Additionally, a joint study was recently completed (Arizona-Sonora Border Master Plan) to recommend a prioritized list of critical border transportation infrastructure. Also, ADOT Director Halikowski currently chairs the Transportation and Trade Corridor Alliance, which serves as the state’s freight task advisory committee. Led by representatives from the Governor’s Office, ADOT, the Arizona Commerce Authority, and the Arizona-Mexico Commission, key stakeholders include state and local governments, planning organizations, transportation and logistics companies, port authorities and others.

- Are there any discussions ongoing within the state to increase allowable truck loads to 130,000 pounds? Not as part of this study, and I am not aware of such a study or discussion at ADOT, but we’ll investigate.

- Have any jurisdictions other than Pima County officially weighed in regarding a preferred I-11 corridor? No, we’ve only received input from agencies on potential constraints (e.g., environmental issues and opportunities) and individual comments from residents.

- What are the impacts to Native American nations and don’t they have to approve the use of their lands? We evaluate impacts to all tribal lands as part of our evaluation process.
Additionally, all Native American communities are stakeholder partners. ADOT has also facilitates a separate consultation process with tribal nations.

- Will this study look at specific land ownership (at the parcel level) and consider land speculation? *No, this study is reviewing major land ownership patterns, such as large tracts of public or tribal lands. In future detailed studies, coordination with individual land owners will occur. Land speculation is not considered.*
- What is the status of potential funding, and when could this Corridor be built? *There is no identified funding source for this project yet. Once funding is identified and the Corridor is incorporated state and regional metropolitan transportation plans, the environmental clearance and preliminary design processes can commence, taking up to eight to ten years before any project implementation.*
- All local agencies should be invited as “cooperating agencies” in subsequent environmental clearance processes.

**Level 1 Screening Questions and Comments**

- Has the trucking industry been surveyed on the alternatives? *Not specifically, although many trucking industry representatives and organizations to which they belong are part of this project’s Stakeholder Partners group.*
- Highly supportive of Alternative C. [received five similar comments]
- Strongly concur that the Corridor recommendation would spur economic development within the Sun Corridor, providing long-term economic benefit for Pima County.
- Alternative C has strong multimodal opportunities. These should be leveraged with the I-10 and I-19 corridors to become the I-11 and Intermountain West Corridor.
- Strongly oppose the Avra Valley bypass based on environmental grounds (e.g., wildlife migration), land use impacts, and the potential to spur undesirable economic development. [received seven similar comments]
- There is a group of 15 business organizations supporting Alternative C in Pima County. They are moving forward with a more detailed analysis of the economic impact/benefits of this Corridor.
Southern Arizona and Beyond Webinar Meeting Summary

October 10, 2013; 2 p.m. PDT/MST
Meeting conducted via Live Meeting and teleconference

Meeting Feedback
Following a brief PowerPoint presentation, team member Dan Andersen led participants in a facilitated dialogue. The following feedback was provided by participants as part of that discussion.

General Questions and Comments
- Tiffany Sprague, Sierra Club: Are the alternatives being considered exclusively for rail or exclusively for highway? Railroads often cannot follow the same alignment as a road. The alternatives being considered will be reviewed for possible multimodal connectivity. Subsequent studies will further evaluate footprints for various modal alignments and linkages of modal alternatives.
- Kevin Dahl, National Parks Conservation Association: You might consider connectivity from I-19 to I-10 to allow traffic heading east to avoid the Tucson metropolitan area.

Level 1 Screening Questions and Comments
- Kevin Dahl, National Parks Conservation Association: Has the Avra Valley alternative been eliminated? The alternatives are wide corridor swaths for purposes of initial study, not specific alignments. As noted in the presentation, alternative “C” is recommended for further study in Southern Arizona; it connects Phoenix and Nogales through Tucson. Specific alignments aren’t being considered or evaluated as part of this study; future studies would evaluate options in further detail.
- Scott Sprague, Arizona Game and Fish Department: I would assume future environmental (NEPA) studies would require review of more than a single alternative. Would alternative “C” be a single alternative, or would future studies evaluate various alignments within this corridor? Future studies (e.g., NEPA) would consider multiple alternatives within the alternative “C” corridor swath; alternative “C” simply provides context for connectivity between the Phoenix metropolitan area and Mexico.
- Kevin Dahl, National Parks Conservation Association: If I understand you correctly, Avra Valley has not been removed from further consideration; if this is the case, I’d suggest you properly depict the area of study on mapping so that individuals understand the scope of study.
- Kevin Dahl, National Parks Conservation Association: Avra Valley is a protected area; building a new facility through this area would affect neighborhoods. This option is dramatically different than simply expanding the existing infrastructure that already traverses through the metropolitan area.
Northern Nevada and Beyond Meeting Summary

October 16, 2013; 2 p.m. PDT/MST
Carson City Community Center
Bonanza Room
851 E. William St.
Carson City, NV

Meeting Feedback
Following a brief PowerPoint presentation, Sondra Rosenberg led participants in a facilitated dialogue. The following feedback was provided by participants as part of that discussion.

General Questions and Comments
- Have you considered truck traffic on I-15? Yes, in this study and a previous study (I-15 Corridor System Master Plan). There is a lack of north-south interstate corridors in the Intermountain West—there are many hundreds of miles between I-5 and I-15—and a need for something in between. Because I-5 is significantly more congested and has higher truck volumes than I-15, we believe a future I-11 should be closer to I-5 (for that and other reasons).
- Have you considered the economic impact of I-11 on small communities? That level of analysis is not feasible in this study as precise alignments in the Northern Nevada Future Connectivity Segment are not being considered. However, we have considered county plans where available.
- Are you coordinating with BLM on their resource management plans? They are partners on this study and have been invited to all meetings. They provided some input during our focus meetings early in 2013. We are in the process of scheduling a coordination meeting with resource agencies along the Corridor.
- Valley Electric in Pahrump was unaware of this study. If you have contact information for someone at Valley Electric we would like to contact them. We have been coordinating with the Nevada State Energy Office. [NOTE: two individuals from Valley Electric have been (and are) on our Stakeholder Partners contact list.]
- What is the ultimate right of way width that will be needed? We are not sure at this point in the study, but will develop various alternative footprints for the priority segments as part of the Level 2 analysis.
- Nye County conducted a study that projected a $2.7 Billion boost to its economy as a result of a high capacity transportation corridor.
- The RTC sees a clear benefit to the I-11 corridor, and a need to engage Oregon and Idaho stakeholders soon to get their input. The RTC can help to facilitate those discussions.

Level 1 Screening Questions and Comments
- Alternatives SS and DD lead to Oregon, and FF to Boise. Has Oregon voiced any opinions? We have not had recent communications with Oregon DOT, and will reach out to them again.
- Are there any fatal flaws with any of the recommended alternatives? None at this phase or level of analysis. Certain portions of alternatives could have flaws that would restrict that portion of the alternative but not fully eliminate that entire alternative.
Northern Nevada and Beyond Webinar Meeting Summary

October 16, 2013; 2 p.m. PDT/MST
Meeting conducted via Live Meeting and teleconference

Meeting Feedback
Following a brief PowerPoint presentation, team member Audra Koester Thomas led participants in a facilitated dialogue. The following feedback was provided by participants as part of that discussion.

General Questions and Comments
- Dennee Alacla, Caltrans: It appears that alternative “DD” may be the only one that traverses into California at this time; however, even if a future alternative does not extend into California, proximate alternatives could impact our network. We look forward to continued coordination regarding this project. *NOTE: Alternative SS also goes through a portion of California.*
Las Vegas Metropolitan Area Meeting Summary

October 17, 2013; 2 p.m. PDT/MST
NDOT, District 1
Main Training Room
123 E. Washington St.
Las Vegas, NV

Meeting Feedback
Following a brief PowerPoint presentation, Sondra Rosenberg led participants in a facilitated dialogue. The following feedback was provided by participants as part of that discussion.

Level 1 Screening Questions and Comments
- There is a lot of residential development along parts of the eastern bypass that will be opposed by the property owners.
- Do not pass through the I-15/US 95 Spaghetti Bowl.
- There are opportunities for intermodal and freight logistics centers at the north end of the eastern bypass.
- Pahrump needs better connectivity to provide economic development. Alternative U would provide that connectivity, and enable I-11 to avoid the overly congested Spaghetti Bowl.
- An eastern bypass would benefit air quality conformity issues. Through-town options pose air quality threats due to volume and congestion.

There were several comments regarding Alternative BB going through the proposed National Monument and portion of Nellis Air Force Base. The study team met with Nellis Air Force Base and had a good discussion regarding the strengths and constraints of alternatives BB and QQ, following which they recommended combining the most favorable portions of these alternatives.
Las Vegas Metropolitan Area Webinar Meeting Summary

October 17, 2013; 2 p.m. PDT/MST
Meeting conducted via Live Meeting and teleconference

Meeting Feedback
Following a brief PowerPoint presentation, team member Dan Andersen led participants in a facilitated dialogue. The following feedback was provided by participants as part of that discussion.

General Questions and Comments
- Irene Bustamante Adams, Nevada State Representative: What are the next steps of this study? Will these five alternative be further narrowed? Yes; we will be moving those five alternatives into a more detailed (“Level 2 Screening”) analysis. We anticipate hosting another round of meetings in January 2014 to present and discuss those findings.
- Irene Bustamante Adams, Nevada State Representative: Will any new infrastructure relative to I-11 impact existing projects planned for Clark County? No; I-11 is a potential future project.

Level 1 Screening Questions and Comments
- Irene Bustamante Adams, Nevada State Representative: Do I understand correctly that alternatives have been evaluated and some are being recommended for further study? Yes, five alternatives within the Las Vegas metropolitan area are being recommended for further study.
- Irene Bustamante Adams, Nevada State Representative: These recommendations seem reasonable and sufficient.
Post-Meeting Submitted Feedback

The following are comments and feedback received via e-mail and the project website from stakeholder partners through November 1, 2013. Additionally, four organizations submitted letters which can be found in their originally-submitted format in the appendix of this report.

- Walt Gray, West Side Town Hall Steering Committee: I am out of state and had problems with the website address. Please share my views with the MAG Transportation Policy and Economic Development Committee staffs and the appropriate staff in ADOT. Thanks. I am concerned about I-11 being looked at primarily as a route from Phoenix to Las Vegas and the northwest. I have been out of state and unable to attend the open houses. This means I have not had access to the maps and other information for I-11. It also means that I have been unable to protest current open house format. I believe open houses for major public works projects should be held in the public hearing format, with public rather than private testimony. I also believe the open houses should be publicized better to attract as large an audience as possible. A public hearing format alone would bring more people. My concern about I-11 is that it will become more than a travel corridor, but also an economic development asset. This means we, as a region and state, will be investing in an asset that will be moving economic development away from low income neighborhoods in Phoenix, Glendale & Peoria. MAG and its member cities need to plan now for more workforce development and economic development in low income neighborhoods so that these people can take advantage of job opportunities in their communities and the region, thereby producing more fair, balanced and stimulating development in the region. This will reduce infrastructure costs; produce better community building, and boost the region’s economy. I hope there will be future opportunities for public hearings on this project. NOTE: a virtual public meeting will be facilitated on the study website during February 2014, and traditional public meetings will be held in Phoenix and Las Vegas in the summer of 2014.

- Marla Lewis, Maricopa Chamber of Commerce: As a strategic partner for the growth and development of Pinal County in Arizona, the Maricopa Chamber of Commerce supports the study of the Interstate 11 freeway system that will link Las Vegas to the southern corner of Arizona. Positive growth and economic development for our community and the state of Arizona are constant determining factors for the businesses and organizations that we partner with, and the life-blood of our existence. We are in support of the new proposed interstate system, and welcome the opportunity to be informed in an ongoing basis with the progress of the initiative. Please keep the Maricopa Chamber of Commerce informed of your initiative and upcoming meeting dates.

- Chris Giunchigliani, Clark County Commissioner: The I-11 project is integral to creating a hub that would benefit Az and NV. It could help us move goods and people. Jobs and economic development are direct benefits. We must improve our infrastructure. Thank you and good luck. This is an exciting project that could interconnect the region.

- Pete Konesky, Nevada State Office of Energy: I have reviewed the presentations for tomorrows discussion that I will not be able to attends due to a commitment in rural Nevada. I was surprised that the Priority Section 3 going through Las Vegas still has the routings going through downtown Las Vegas. These routings are going to have an impact with trucking going through an already congested traffic pattern and widening these routes through town will get more and more expensive as we move toward 2050. The best interstate routings that I have seen routed traffic around large metro areas with access routes into the metro area. The time factor of bypassing the in-city congestion would be an advantage to truckers and those en-route to
another destination. These are personal comments, but with limited highway funding this is going to be a continued problem. If we could keep politicians and those with agendas out of the planning, it would make things much more unbiased. Too many decisions are made looking at today’s needs and not 20 or more years downstream.

I-11 and Intermountain West Corridor Study: Stakeholder Partners Meetings

I-11 and Intermountain West Corridor Study

Stakeholder Partners
Level 1 Evaluation Results

In partnership with

Southern Arizona Future Connectivity Segment: October 10, 2013
Priority Section #1: Phoenix Metro Area: October 8, 2013
Priority Section #2: Northern Arizona/Southern Nevada: October 9, 2013
Priority Section #3: Las Vegas Metropolitan Area: October 17, 2013
Northern Nevada Future Connectivity Segment: October 16, 2013

Agenda

• Progress update
• Summary of last meeting
• Purpose of this meeting
  – Revised Universe of Alternatives with Stakeholder Partners’ input
  – Review / discuss preliminary results of L1 Screening of Alternatives
  – Review / discuss Next Steps
Summary of Last Round of Meetings (August 12 - 15, 2013)

- 5 Meetings – 193 attendees
- Presented revised Level 1 evaluation criteria
  - Various changes per Stakeholder Partners’ meetings and input
- Presented universe of alternatives
  - Southern Arizona Future Connectivity Segment: 6 alternatives
  - Priority Section #1: 9 alternatives
  - Priority Section #2: 8 alternatives
  - Priority Section #3: 11 alternatives
  - Northern Nevada Future Connectivity Segment: 5 alternatives

Revised Universe of Alternatives (with Stakeholder Partners’ input)

- Southern Arizona Future Connectivity Segment: +2 alternatives
  - Alt II: Per request to use I-8 as a connection to the Phoenix area
  - Alt JJ: Removed, and then reinserted per YMPO request
Revised Universe of Alternatives
(with Stakeholder Partners’ input)

**Southern Arizona Future Connectivity Segment:** +2 alternatives
- Alt II: Per request to use I-8 as a connection to the Phoenix area
- Alt JJ: Removed, and then reinserted per YMPO request

**Priority Section #1:** +4 alternatives
- Alt KK: Per request to connect to Southern Arizona using I-8
- Alt LL: Per request to use proposed AZ-801 as reliever to I-10
- Alt MM: Per request to study new alignment using existing segments
- Alt NN: Per request to use more components of AZ-303L
Revised Universe of Alternatives
(with Stakeholder Partners’ input)

- Priority Section #1: +4 alternatives
  - Alt KK: Per request to connect to Southern Arizona using I-8
  - Alt LL: Per request to use proposed AZ-801 as reliever to I-10
  - Alt MM: Per request to study new alignment using existing segments
  - Alt NN: Per request to use more components of AZ-303L
Revised Universe of Alternatives
(with Stakeholder Partners’ input)

• Priority Section #1: +4 alternatives
  – Alt KK: Per request to connect to Southern Arizona using I-8
  – Alt LL: Per request to use proposed AZ-801 as reliever to I-10
  – Alt MM: Per request to study new alignment using existing segments
  – Alt NN: Per request to use more components of AZ-303L

• Priority Section #2: +2 alternatives
  – Alt OO: Per request to study CYMPO and Mohave County connections
  – Alt PP: Per request to study CYMPO connection
  – Alt UU: Per request to study Mohave County connection
Revised Universe of Alternatives
(with Stakeholder Partners’ input)

• Priority Section #2: +2 alternatives
  – Alt OO: Per request to study CYMPO and Mohave County connections
  – Alt PP: Per request to study CYMPO connection
  – Alt UU: Per request to study Mohave County connection
Revised Universe of Alternatives (with Stakeholder Partners’ input)

• Priority Section #3: Same number of alternatives
  – Reconfiguration of alternatives to incorporate Boulder City Bypass

• Northern Nevada Future Connectivity Segment: +2 alternatives
  – Alt SS: Per request to use USA Parkway/I-80/US-50 corridor connection between Fernley/Fallon and Reno
  – Alt TT: Per request to better serve Elko area
Revised Universe of Alternatives (with Stakeholder Partners’ input)

- Northern Nevada Future Connectivity Segment: +2 alternatives
  - Alt SS: Per request to use USA Parkway/I-80/US-50 corridor connection between Fernley/Fallon and Reno
  - Alt TT: Per request to better serve Elko area

Level 1 Evaluation Criteria

<table>
<thead>
<tr>
<th>Evaluation Category</th>
<th>Proposed Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Legislation</td>
<td>- How well does the alternative meet the intent of legislative actions, including NARP-21 and the 1991 Intrastate Highway Systems Designation Act?</td>
</tr>
<tr>
<td>System Linkages</td>
<td>- How well does this alternative connect major national and international activity centers from Nevada to Canada through the Interstate system?</td>
</tr>
<tr>
<td>- How well does this alternative most directly close gaps and/or develop missing linkages in the regional and national transportation system?</td>
<td></td>
</tr>
<tr>
<td>- How well does this alternative connect with existing segments/intersections?</td>
<td></td>
</tr>
<tr>
<td>Trade Corridor</td>
<td>- How well does this alternative connect major freight hubs and high-capacity transportation corridors?</td>
</tr>
<tr>
<td>Model Interrelationships</td>
<td>- How well does this alternative accommodate multiple modes in a shared alignment footprint (highway and rail)?</td>
</tr>
<tr>
<td>Closeness/Convenience</td>
<td>- How well does this alternative support regional, State and national economic development goals?</td>
</tr>
<tr>
<td>Equity</td>
<td>- How well does this alternative comply with corridor-related actions (right-of-way)?</td>
</tr>
<tr>
<td>Impact on Environment</td>
<td>- How well does this alternative conform to locally adopted transportation plans?</td>
</tr>
<tr>
<td>Environmental/Sustainability</td>
<td>- How compatible is this alternative with regional scenic, environmental and land management agency planning?</td>
</tr>
<tr>
<td>Land Use and Ownership</td>
<td>- How compatible is this alternative with regional land use and growth strategies?</td>
</tr>
<tr>
<td>Community Acceptance</td>
<td>- How will this alternative impact local community patterns?</td>
</tr>
<tr>
<td>Cost</td>
<td>- What is the overall relative cost of this alternative, where 1 is the highest relative cost and 10 is the lowest?</td>
</tr>
</tbody>
</table>
Alternative C - Recommended for Further Analysis

**Opportunities**
- Connects major freight and economic activity centers within Arizona and Mexico (e.g., Phoenix, Tucson, Hermosillo and Mexico City)
- Mariposa and DeConcini LPOEs have capacity/can be expanded to accommodate passenger and freight traffic
- Strong multimodal and intermodal opportunities

**Constraints**
- Potential environmental constraints
Alternative II - NOT Recommended for Further Analysis

- Opportunities
  - Freight activity/multimodal opportunities in Yuma

- Constraints
  - Does not connect to high capacity trade corridor in Mexico; no plans for Sonora to implement a high capacity trade corridor connecting to San Luis II POE
  - Potential environmental constraints

---

Alternative A - NOT Recommended for Further Analysis

- Opportunities
  - Freight activity/multimodal opportunities in Yuma

- Constraints
  - Does not connect to Phoenix and Tucson metropolitan area economic activity centers
  - Does not connect to high capacity trade corridor in Mexico; no plans for Sonora to implement a high capacity trade corridor connecting to San Luis II POE
  - Potential environmental constraints
Alternative E - NOT Recommended for Further Analysis

- Opportunities
  - Freight activity/multimodal opportunities in Douglas

- Constraints
  - Limited connectivity to economic activity centers in Mexico
  - Does not connect to high capacity trade corridor in Mexico; no plans for Sonora to implement a high capacity trade corridor connecting to Douglas POE
  - Long corridor length could result in highest cost

Alternative D - NOT Recommended for Further Analysis

- Opportunities
  - Potential for rehabilitated rail crossing at Naco LPOE

- Constraints
  - Limited connectivity to economic activity centers in Mexico
  - Naco LPOE and connecting transportation infrastructure not conducive to major freight traffic
  - Potentially significant watershed, critical habitat, and other environmental constraints
Alternative B - NOT Recommended for Further Analysis

- **Opportunities**
  - Serves Phoenix and Tucson activity centers

- **Constraints**
  - Sasabe LPOE and connecting transportation infrastructure not conducive to major freight traffic
  - Limited connectivity to economic activity centers in Mexico
  - Significant environmental and land ownership constraints

Alternative JJ - NOT Recommended for Further Analysis

- **Constraints**
  - Significant environmental, land ownership, and right-of-way constraints
  - Does not connect to high capacity trade corridor in Mexico; Lukeville LPOE and connecting transportation infrastructure not conducive to major freight traffic
Alternative Recommended for Further Analysis

Priority Section #1: Phoenix Metro Area
Level 1 Screening Results
### Alternative G - Recommended for Level 2 Analysis

**Opportunities**
- Creates missing linkage in CANAMEX designation
- Contributor to the regional transportation system that provides relief to congested corridors
- Consistent with documentation of local and regional growth strategies and transportation plans

**Constraints**
- Potential environmental constraints

### Alternative H - Recommended for Level 2 Analysis

**Opportunities**
- Creates missing linkage in CANAMEX designation
- Contributor to the regional transportation system that provides relief to congested corridors
- Consistent with documentation of local and regional growth strategies and transportation plans

**Constraints**
- Potential environmental constraints
Alternative MM - Recommended for Level 2 Analysis

- Opportunities
  - Creates missing linkage in CANAMEX designation
  - Contributor to the regional transportation system that provides relief to congested corridors
- Constraints
  - Potential environmental constraints

Alternative I - Recommended for Level 2 Analysis

- Opportunities
  - Creates missing linkage in CANAMEX designation
  - Contributor to the regional transportation system that provides relief to congested corridors
- Constraints
  - Potential environmental constraints
  - Not fully consistent with local transportation plans
Alternative LL - Recommended for Level 2 Analysis

• Opportunities
  – Creates missing linkage in CANAMEX designation
  – Contributor to the regional transportation system that provides relief to congested corridors

• Constraints
  – Potential environmental constraints

Alternative KK - NOT Recommended for Level 2 Analysis

• Opportunities
  – Creates missing linkage in CANAMEX designation

• Constraints
  – Does not connect to Tucson metropolitan area, or major economic hubs in Mexico
  – Potential environmental constraints
Alternative J - NOT Recommended for Level 2 Analysis

- Opportunities
  - Opportunity to connect several freight hubs

- Constraints
  - Not fully consistent with regional growth strategies and transportation plans; previous studies have noted issues with the SR-303L corridor as a major trade route
  - Widening existing corridors may not be practical; additional trade flows could contribute to congestion

Alternative NN - NOT Recommended for Level 2 Analysis

- Opportunities
  - Opportunity to connect several freight hubs

- Constraints
  - Not fully consistent with regional growth strategies and transportation plans; previous studies have noted issues with the SR-303L corridor as a major trade route
  - Widening existing corridors may not be practical; additional trade flows could contribute to congestion
Alternative K

Opportunities
- Utilizes existing transportation corridors

Constraints
- Utilizing existing corridors as major trade route not consistent with regional growth strategies and transportation plans; includes potential right-of-way issues
- Widening existing corridors may not be practical; additional trade flows could contribute to congestion

Alternative L

Opportunities
- Utilizes existing transportation corridors

Constraints
- Widening the existing I-17 and I-10 corridors to support additional freight traffic may not be practical, therefore additional trade flows would contribute to existing congestion
- Not as direct a connection to Las Vegas
Alternative F - NOT Recommended for Level 2 Analysis

- Constraints
  - Bypasses Phoenix metropolitan area as a major economic activity center
  - Not consistent with regional growth strategies, economic development, and transportation plans; existing corridors not anticipated to handle capacity of major trade corridor
  - Potential environmental constraints

Alternatives Recommended for Level 2 Analysis

- Alternative G
- Alternative H
- Alternative MM
- Alternative I
- Alternative LL
Priority Section #2: No. Arizona/So. Nevada
Level 1 Screening Results

Alternative Q - Recommended for Further Analysis

- Opportunities
  - Provides most direct connection between Phoenix and Las Vegas, and to major activity centers and freight hubs
  - Utilizes an existing high capacity corridor and crossing of the Colorado River, as well as the proposed Boulder City Bypass
  - Supports high number of economic industry cluster targets for the state/region

- Constraints
  - Possible environmental constraints
Alternative UU - Recommended for Further Analysis

- Opportunities
  - Provides direct connection between Phoenix and Las Vegas, and to major activity centers and freight hubs
  - Supports multimodal connectivity south of Kingman and economic development

- Constraints
  - Environmental constraints

Alternative P - NOT Recommended for Further Analysis

- Opportunities
  - Utilizes improved US-95 in Nevada with possible improved opportunities for multiple uses

- Constraints
  - Potential environmental constraints (traverses and/or borders the Black Mountains – prime habitat for bighorn sheep and Sonoran Desert tortoise. Also, traverses areas identified by AGFD as priority areas for maintaining wildlife connectivity)
Alternative T - NOT Recommended for Further Analysis

• Opportunities
  – Uses existing high capacity corridors

• Constraints
  – Significant environmental constraints and potential right-of-way issues to widen I-17
  – Not as direct a route, less likely to be used, especially for freight

Alternative S - NOT Recommended for Further Analysis

• Opportunities
  – Topography more conducive to major freight flows

• Constraints
  – Significant environmental constraints (passes through mountain ranges with considerable connectivity challenges. Also, bisects Chino Valley – important American pronghorn habitat)
  – Potential open space and land ownership constraints traversing Prescott National Forest land.
### Alternative R

**Recommended for Further Analysis**

- **Opportunities**
  - Potential alternative high capacity corridor to I-17

- **Constraints**
  - Significant environmental constraints (passes through mountain ranges with considerable connectivity challenges. Also, bisects Chino Valley – important American pronghorn habitat)
  - Land ownership and open space constraints traversing Prescott National Forest land.

### Alternative O

**Recommended for Further Analysis**

- **Opportunities**
  - Supports economic activity in western Arizona

- **Constraints**
  - Does not connect to major activity center or freight hubs in Phoenix metropolitan area
  - Potential environmental constraints
  - Does not support economic industry targets for the state/region
Alternative PP - NOT Recommended for Further Analysis

- Opportunities
  - Potential alternative high capacity corridor to I-40

- Constraints
  - Significant environmental constraints (passes through mountain ranges with considerable connectivity challenges. Also, bisects Chino Valley – important American pronghorn habitat)
  - Land ownership and open space constraints traversing Prescott National Forest land.

Alternative OO - NOT Recommended for Further Analysis

- Opportunities
  - Potential alternative high capacity corridor to I-40

- Constraints
  - Significant environmental constraints (passes through mountain ranges with considerable connectivity challenges. Also, bisects Chino Valley – important American pronghorn habitat)
  - Land ownership and open space constraints traversing Prescott National Forest land.
Alternative M - NOT Recommended for Further Analysis

- Opportunities
  - Supports economic activity in western Arizona

- Constraints
  - Does not connect to major activity center or freight hubs in Phoenix metropolitan area
  - Potential environmental and land ownership constraints

Alternative N - NOT Recommended for Further Analysis

- Opportunities
  - Supports economic activity in western Arizona

- Constraints
  - Does not connect to major activity center or freight hubs in Phoenix metropolitan area
  - Potential environmental and land ownership constraints
Alternatives Recommended for Level 2 Analysis

Priority Section #3: Las Vegas Metro Area
Level 1 Screening Results
**Alternative AA - Recommended for Further Analysis**

- **Opportunities**
  - Supports Las Vegas metropolitan area activity center and economic development goals
  - Connection to major freight hubs, existing highway, rail and intermodal yard
  - Minimal environmental impacts

- **Constraints**
  - Will aggravate already congested corridor with widening constraints

**Alternative QQ - Recommended for Further Analysis**

- **Opportunities**
  - Provides missing link; completes the system around Las Vegas metropolitan area
  - Provides relief to congested corridors through the metropolitan area
  - Supports Las Vegas metropolitan area activity center and provides connection with major freight hubs/areas

- **Constraints**
  - Traverses environmentally sensitive areas
Alternative BB - Recommended for Further Analysis

- Opportunities
  - Provides missing link; completes the system around Las Vegas metropolitan area
  - Provides relief to congested corridors through the metropolitan area
  - Supports Las Vegas metropolitan area activity center and provides connection with major freight hubs/areas

- Constraints
  - Traverses environmentally sensitive areas with land ownership constraints

Alternative Y - Recommended for Further Analysis

- Opportunities
  - Supports Las Vegas metropolitan area activity center and economic development goals
  - Relatively direct route
  - Minimal environmental impacts with sufficient right-of-way if widening is needed

- Constraints
  - Does not provide missing linkages
  - Contributes additional traffic to congested corridors
Alternative Z - Recommended for Further Analysis

- Opportunities
  - Supports Las Vegas metropolitan area activity center
  - Most direct route that follows congressionally designated high priority corridors
  - Minimal environmental impacts

- Constraints
  - Will aggravate already congested corridor with widening constraints

Alternative CC - NOT Recommended for Further Analysis

- Opportunities
  - Provides missing link in system and relief to congested corridors through the metropolitan area

- Constraints
  - Traverses environmentally sensitive areas with land ownership constraints
  - Difficult grades
  - Does not efficiently connect to Boulder City Bypass
Alternative RR - NOT Recommended for Further Analysis

- **Opportunities**
  - Provides partial missing link in system and relief to congested corridors through the metropolitan area

- **Constraints**
  - Out of direction travel
  - Traverses environmentally sensitive areas

Alternative X - NOT Recommended for Further Analysis

- **Opportunities**
  - Provides missing link in system and bypasses congested “Spaghetti Bowl”

- **Constraints**
  - Limited connectivity to Las Vegas metropolitan area activity center or major existing or planned freight hubs
  - Potential environmental impacts
Alternative W - NOT Recommended for Further Analysis

- **Opportunities**
  - Provides missing link in system and bypasses congested “Spaghetti Bowl”

- **Constraints**
  - Limited connectivity to Las Vegas metropolitan area activity center or major existing or planned freight hubs
  - Potential environmental impacts

Alternative V - NOT Recommended for Further Analysis

- **Opportunities**
  - Provides missing link in system and bypasses congested “Spaghetti Bowl”

- **Constraints**
  - Limited connectivity to Las Vegas metropolitan area activity center or major existing or planned freight hubs
  - Potential environmental impacts
Alternative U - NOT Recommended for Further Analysis

- Opportunities
  - Provides missing link in system and bypasses congested “Spaghetti Bowl”
  - Partially follows proposed rail corridor

- Constraints
  - Very limited connectivity to Las Vegas metropolitan area activity center or major existing or planned freight hubs
  - Potential environmental impacts

Alternatives Recommended for Level 2 Analysis

- Alternative AA
- Alternative QQ
- Alternative BB
- Alternative Y
- Alternative Z
No. Nevada Future Connectivity Segment Level 1 Screening Results

Alternative SS - Recommended for Further Analysis

- Opportunities
  - Supports Las Vegas and Reno metropolitan area activity centers and regional/state economic development goals
  - Connection to major freight hubs, existing highway, rail and intermodal yard
  - Closes gaps between two Congressionally-designated corridors and aligns with corridor-related actions taken to date

- Constraints
  - Potential environmental constraints
### Alternative FF

**Recommended for Further Analysis**

- **Opportunities**
  - Supports major economic activity centers and regional/state economic development goals
  - Connection to major freight hubs, existing highway, rail and intermodal yard
  - Provides opportunity to connect to high priority corridor (US-95 from Oregon to Canada)

- **Constraints**
  - Potential environmental constraints

### Alternative DD

**Recommended for Further Analysis**

- **Opportunities**
  - Supports Las Vegas and Reno metropolitan area activity centers and regional/state economic development goals
  - Connection to major freight hubs, existing highway, and rail yard
  - Closes existing gaps between I-580 and US-95

- **Constraints**
  - Not compatible with major land ownership – traverses U.S. Forest Service land
Alternative EE - NOT Recommended for Further Analysis

- Opportunities
  - Supports Las Vegas and Reno metropolitan area activity centers and regional/state economic development goals
  - Closes existing gaps between I-580 and US-95

- Constraints
  - Significant environmental constraints
  - Traverses National Conservation Area
  - Land ownership constraints traversing U.S. Forest Service and tribal lands

Alternative TT - NOT Recommended for Further Analysis

- Opportunities
  - Connections to existing highway, freight hubs, intermodal yards and airport in Elko

- Constraints
  - Limited connections to major freight and economic activity centers
  - Potential environmental constraints
  - Does not fully support regional/state economic development goals (limited connectivity)
Alternative HH - NOT Recommended for Further Analysis

• Opportunities
  – Accommodate multiple modes in shared alignment – along existing rail line

• Constraints
  – Limited connections to major freight and economic activity centers
  – Potential environmental constraints through aboriginal roaming area
  – Does not fully support regional/state economic development goals (limited connectivity)

Alternative GG - NOT Recommended for Further Analysis

• Opportunities
  – Provides opportunity to connect to high priority corridor (US-95 from Oregon to Canada)

• Constraints
  – Limited connections to major freight and economic activity centers
  – Potential environmental constraints
  – Not consistent with transportation plans – Connecting Nevada
Alternatives Recommended for Further Analysis

Alternative SS  Alternative FF  Alternative DD

Next Steps
Next Steps

• **Priority Segment Alternatives**
  - Conduct Level 2 evaluation involving additional and more detail screening of alternatives in 1) Phoenix metropolitan area, 2) Northern Arizona and Southern Nevada segment and 3) Las Vegas metropolitan area
  - Prepare Corridor Concept Report

• **Northern Nevada and Southern Arizona Future Connectivity Segments**
  - Prepare Feasibility Assessment Report for these future connectivity segments only
  - Identify potential future studies

• **Upcoming Stakeholder Partner Meetings**
  - January 2014: Level 2 Analysis of Priority Segments
  - March 2014: Final recommendations (Joint meetings for entire corridor)
  - May 2014: Implementation Plan, P&N and Business Case (Joint meetings)

**Level 2 Evaluation Criteria: Process**
(Applicable only to Priority Segments)
### Level 2 Evaluation Criteria

RE: Comments to Interstate 11 and Intermountain West Corridor Study

Dear Ms. Rosenberg:

On behalf of the Board of Lincoln County Commissioners I am writing to **encourage continued analysis, work and the overall consideration by the Nevada Department of Transportation (“NDOT”) of alternative Eastern Nevada corridors** for the northern extension of the proposed Interstate 11 (I-11) between the Las Vegas area and Northern Nevada. The Board of Lincoln County Commissioners reviewed the results of the preliminary analysis in the document entitled, *Technical Memorandum: Draft Level 1 Results Summary* (October 2013) (“Technical Memorandum”) and offers the following comments:

1. **Agriculture is one of the targeted key industry clusters identified by the Nevada Governor’s Office of Economic Development** (see [http://www.diversifynevada.com/](http://www.diversifynevada.com/)). However, Page 6, Table 3 and Page 133, Table 10, in the *Arizona and Nevada Industry Clusters* of the Technical Memorandum does not include Agriculture as one of the industry clusters being targeted by the Nevada. Agriculture IS a key industry in the State of Nevada as the Governor’s Office of Economic Development recognizes, and Agriculture IS the main industry in Lincoln County. **Therefore, the corridor alternative analysis in the Technical Memorandum should be supplemented to recognize the importance that any of the Nevada corridors, and in particular, the Eastern Nevada corridor alternatives, would have on expanding and diversifying Agriculture in Nevada.**
2. While the notes on Page 146 of the Technical Memorandum regarding Environmental Sustainability criteria indicate that Alternative HH passes through the Confederated Tribes of the Goshute Reservation aboriginal roaming area, the Technical Memorandum fails to indicate for all other alternatives, including those recommended for further analysis, that each of the other alternatives passes through aboriginal roaming areas of federally recognized Tribes (such as Walker River Paiute Tribe, Fallon Paiute Tribe, Pyramid Lake Paiute Tribe, Ft. McDermitt Paiute and Shoshone Tribe, Yomba Shoshone Tribe and Duck Valley Shoshone Tribe). Further, the analysis also fails to recognize that some of these alternatives actually pass through federally designated reservation lands (i.e. the Walker River Paiute Indian Reservation, Yomba Shoshone and Pyramid Lake Paiute Indian Reservation).

3. The analysis of Trade Corridor and/or Economic Vitality criteria on Pages 146 and 150 of the Technical Memorandum for Alternatives HH and TT fails to recognize the following:

   a. the importance to not only Southern Nevada, but all of Eastern Nevada, of servicing the Apex Industrial area, and the 43,000 acre Coyote Springs master planned community (including, all uses from industrial, commercial, multi-family, single family residential, and other uses) (with an approximate $200 million dollars of infrastructure already built and an estimated population at build-out of over 150,000);

   b. the ability of this corridor to provide rail and/or truck service to the fledgling natural gas production industry anticipated to boom in Eastern Nevada in the coming years;

   c. the legislatively authorized sale (as an authorized BLM disposal) by Lincoln County of 90,000 acres of land in Lincoln County and the tremendous development and economic growth and activity resulting from these dispositions over the next 20 years;

   d. proximity to and ability to interconnect the Union Pacific mainline running through Lincoln County to the mainline rail lines running through Elko County (and the fact that rail already extends south into White Pine County in the vicinity of U.S. 93); and

   e. the linkage of major mining areas in White Pine County and Elko County to equipment, machinery and other suppliers in the Las Vegas area.

4. Pages 145 and 150 of the Technical Memorandum include, as Constraints for Alternatives HH and TT, "Because of limited connectivity, does not fully support economic development goals". Both Alternatives HH and TT provide the same degree of connectivity between I-15 and the Las Vegas area and I-80 (and ultimately the Reno area), as well as connectivity between mainline rail in Southern Nevada and mainline rail in Northern Nevada, as do Western Nevada alternatives recommended for further analysis. This should not be any more a discriminating factor for the Eastern Nevada alternatives than for all other alternatives considered.
5. All Western Nevada alternatives considered in the Technical Memoranda’s analysis face significant and potentially fatal environmental constraints. For example, difficult terrain for construction and/or institutional hurdles (such as crossing U.S. Forest Service lands; crossing Indian reservation lands; crossing Department of Defense restricted lands; in addition to private property impacts) to a degree equal to, or exceeding, similar constraints for Lincoln County’s preferred Eastern Nevada alternatives. The Technical Memorandum does not adequately identify, or consider, these constraints for the Western Nevada alternatives. Thus, these additional factors should be included for the Western Nevada alternatives in a supplementary analysis.

In conclusion, the Board of Lincoln County Commissioners determined that the analysis contained in *Technical Memorandum: Draft Level 1 Results Summary* (October 2013) is not complete, and is inaccurate, and therefore the analysis contained in the Technical Memorandum requires further review, discussion and analysis, which should result in a supplemental report. In sum, the recommendations in the Technical Memorandum are not defensible.

Further, the Board of Lincoln County Commissioners questions the wisdom of not carrying at least one Eastern Nevada alternative forward for further analysis. Should all three Western Nevada alternatives be found to be infeasible due environmental, socio-economic, institutional, and/or constructability issues, NDOT could be faced with no alternative to carry forward, and that would be devastating; the proposed I-11 is of significant value to not only regions within Nevada, but the entire State of Nevada.

*Therefore, the Board of Lincoln County Commissioners encourages and supports NDOT’s inclusion of at least one Eastern Nevada alternative in subsequent phases of the I-11 planning process.* Lincoln County looks forward to working with NDOT on future phases of the I-11 planning process.

Sincerely,

Ed Higbee

Re: Comments on the Level 1 screening and draft alternative corridors for Interstate 11

Dear Interstate 11 Corridor Team:

Thank you for the opportunity to comment on the Level 1 screening and preliminary corridor alternatives for the proposed Interstate 11 (I-11). Please accept these comments on behalf of the Sierra Club’s Grand Canyon Chapter and our 12,000 members in Arizona and more than 40,000 members and supporters.

The Sierra Club’s mission is “to explore, enjoy, and protect the wild places of the earth; to practice and promote the responsible use of the earth’s ecosystems and resources; and to educate and enlist humanity to protect and restore the quality of the natural and human environments.” Sierra Club has long been committed to protecting public lands and public health and to ensuring that transportation and development accommodate ecological considerations. Our members have a significant interest in the proposed I-11 and Intermountain West Corridor as many live in or use areas within these corridors.

We continue to have serious concerns about the proposed I-11 project, many of which were raised in our July 26, 2013, comments on the Draft Corridor Justification Report. These are discussed in further detail below.

**Focus remains on roads rather than alternative modes of transportation**

Chief among our concerns is that the study seems to remain focused on constructing new or enhancing existing roads, rather than seriously considering and providing preference to alternative modes of transportation, including freight and passenger rail. At the stakeholder meetings on October 8–10, 2013, we were assured that rail is still being considered. However, the information provided during these meetings focused on existing roads as well as roads that would need to be constructed. When asked
about preference between roads vs. rail, the responses implied that rail is being considered but only in conjunction with roads.

We urge the study team to seriously consider the possibility of utilizing rail alone, rather than in conjunction with construction of new or enhancement/widening of existing roads. As is evident from the Corridor Justification Report, all of the other megaregions to which our area was compared have existing rail lines that are used for both freight and passengers. Arizona and Nevada, however, lack such systems. Instead, we focus almost exclusively on a road network that, as information provided by the I-11 study team explicates, is insufficient to meet the transportation needs of our society. By continuing to focus primarily on roads and by only including alternative transportation modes as a sideline, neither our transportation nor our economic needs will be met. We encourage the study team to identify possible corridors and to utilize screening methods that identify routes suitable for rail first with thought to roads second.

Economic vitality vs. environmental sustainability

As we noted during the October 8, 2013, stakeholder meeting, we are also concerned that the screening used to identify alternatives could pit “Economic Vitality” against “Environmental Sustainability” which sets up a false choice. It is clear that Economic Vitality is dependent on Environmental Sustainability, so presenting them as either or is inappropriate. For example, by including item 5A – “How consistent is this alternative with local, regional, and state economic development plans?” – under “Economic Vitality” in the Level 2 screening criteria without a comparable assessment under “Environmental Sustainability,” preference is given to an alternative that promotes development. However, consideration for environmental impacts as a result of this development would not be assessed, as these criteria are currently written.

We encourage the study team to provide equal consideration of economic benefits and environmental concerns. Using the above example, if such language is included under “Economic Vitality,” similar consideration must be provided under “Environmental Sustainability,” such as, “How will development that is supported by this alternative affect environmental resources and long-term ecosystem functioning?” Similar consideration and language should be provided for items 5B–D, including short-term impacts and cost/benefits of delay. Again, we ask that your recognize Economic Vitality, at least over the long term, is impossible without Environmental Sustainability.

Thank you again for the opportunity to review this report and for considering our comments. We look forward to learning more about this project and continuing to be involved.

Sincerely,

RE: Town of Wickenburg Second Comment Letter Regarding Proposed I-11

Dear Mr. Kies:

Thank you for reviewing the Town of Wickenburg’s first comment letter, dated July 16, 2013, on the proposed Interstate 11 corridor. We appreciate the opportunity to continue to provide feedback as the I-11 & Intermountain West Corridor Study progresses and continue to regard the Arizona Department of Transportation as a critically important community partner.

You recently received a letter, dated October 1, 2013, from Wickenburg Chamber of Commerce President Cindy Logan regarding concerns expressed by our local business community about potential alignments for I-11. I wish to echo several of the sentiments contained in that letter and offer the Town’s continued assistance in providing all interested parties the opportunity to participate in the study process.

In particular, ADOT is to be commended for its quick organization of a business community meeting in Wickenburg on October 2, 2013, and we encourage more such opportunities to be made available as the study evolves. Frequent communication with stakeholders is essential for successful project delivery, especially for a project that will have a significant impact on Wickenburg’s business owners.
Likewise, we encourage the study team to fully vet all options available for aligning I-11, including those already identified for Level II evaluation. In addition to cost, land uses, and other considerations, the impact on Wickenburg’s existing business community and future economic growth should be carefully analyzed.

I-11’s impact on Wickenburg will be more significant than for most other communities, and it is vital that we are viewed as a partner entity during each step of the planning process. As noted in our first comment letter, I-11 must be approached as a way to enhance Wickenburg’s economy, rather than function as a third bypass of the town.

As the study unfolds and I-11 inches closer to being a reality, ADOT must also remember the importance of improving existing transportation facilities in and around Wickenburg, including long-awaited safety upgrades to US 93. We appreciate ADOT’s extensive investment in this corridor and urge continued attention to the area’s needs.

Thank you again for the opportunity to comment on this issue. Please do not hesitate to contact me with questions.

Sincerely,

John H. Cook
Mayor

RE: I-11 Business Statement

Dear Mayor Cook & Councilmembers;
I am writing to you today on behalf of the chamber board of directors, our transportation committee and 525 members who are proactive in transportation issues regarding our community.

As you know, Interstate 11 which is presently under a two year study could negatively impact our business community & economy if constructed in the near future to bypass Wickenburg. The Wickenburg Chamber of Commerce has continued to advocate for highway maintenance, preservation, and expansion throughout its 82 year history.

Our chamber staff and volunteer committee leaders have been engaged in conversation with the Town of Wickenburg and ADOT concerning the importance of what it will mean to our community if this Interstate Highway is built without the input of local businesses.

Wickenburg businesses rely on highway traffic and if bypassed, our economy will be devastated. This will put many people out of business and cost many jobs. The major source of sales tax revenue for the town will suffer immensely. Our concern and the concern of our local businesses is that the development of another major interstate highway bypassing Wickenburg will be the death blow for a significant number of years in this rural community. We have seen this happen previously and to many other rural towns in Arizona.
The Chamber board of directors along with the Chamber transportation committee is requesting that the Mayor and Town council send a letter to ADOT expressing the concerns of the business community and property owners. We will continue to work with you to stay informed and engaged about route placement.

It may well be that our alternatives will turn out to be less expensive and quicker to implement than a route that bypasses Wickenburg to the West, and be an altogether satisfactory solution to the current need for a better highway route between Phoenix and Las Vegas.

As in previous letters to the ADOT Board and conversation at a variety of town and chamber meetings over the years, we must continue to advocate dollars being allocated to finish the improvements needed on Highway 93 from the northern roundabout to Vulture Mine Extension and from this location to Highway 71 & 93. We ask that this point be referenced in the same letter, and in future correspondence relative to Highway 93. We also recognize that the potential western location could take anywhere from 15-50 years to build.

The concerns from our businesses are real, and continued dialogue with you and ADOT personnel involved in the I-11 route decisions is imperative to our economic success. Representatives from our organization will continue to attend the I-11 meetings, as well as meeting with Town Staff on a regular basis regarding the status of scheduling a future I-11 meeting here.

A letter from the town expressing the above concerns and requests has strength, and will be recognized by ADOT and can be very beneficial to our business community’s needs.

Thank you for your time and consideration.

Sincerely,

Cindy Logan

FEDERAL LANDS ACCESS PROGRAM

Nevada

The Federal Lands Access Program is a new Federal Grant Program for states, counties, tribes and local governments. The program provides funds for transportation projects that provide access to, are adjacent to, or are within Federal lands with emphasis placed on those that access high use recreation sites and are Federal economic generators. The facility must be owned or maintained by the state, tribe or local government.

PROGRAM FACTS

Nevada Program Funds Available: $30 - $42 Million
Match required: 5%
Call for Projects Closes: August 15, 2013
Website: http://www.cfihd.gov/programs/flap/nv

Eligible projects include transportation planning, research, engineering, preventive maintenance, rehabilitation, restoration, construction, and reconstruction of Federal lands access transportation facilities located on or adjacent to, or that provide access to Federal land, and: (1) Adjacent vehicular parking areas; (2) Acquisition of necessary scenic easements and scenic historic sites; (3) Provisions for pedestrians and bicycles; (4) Environmental mitigation in or adjacent to Federal land to improve public safety and reduce vehicular caused wildlife mortality while maintaining habitat connectivity; (5) Construction and reconstruction of roadside rest areas, including sanitary and water facilities; and (6) Operation and maintenance of transit facilities.

**Nevada Northern Railway**

The Nevada Northern Railway consists of 149 route miles between the Overland Route main line in Cobre and McGill Junction near Ely. The White Pine Historical Railroad Foundation purchased the short line in 2004 from BHP Copper North America, which used the line to serve its copper mine in White Pine County. BHP discontinued service on the line in 1999, when the copper mines closed.

White Pine Historical Railroad Foundation hired S & S Shortline to rehabilitate segments of its route. S & S Shortline recently completed upgrading 45 miles of the line between Shafter (MP 18.5) and Currie (MP 63) to Class 2 track with maximum authorized speeds of 25 mph. The route is track warrant controlled (TWC) and consists of 60-pound rail. This 45-mile-long segment is not actively used for freight service at present, although the line is well situated to provide shipments between the UPRR Central Corridor main line in Shafter and the copper mine in Currie. The White Pine Historical Railroad Foundation also hired S & S Shortline to rehabilitate the southern section of the track between Currie and McGill so that S & S Shortline can operate future freight service and so that the Foundation can possibly accommodate an extension to the Nevada Northern Railway excursion train line in Ely. The 18.5-mile segment between Cobre and Shafter on the north end, which provides a link between the Overland Route and the Central
Corridor, is currently out of service and will require considerable upgrading to accommodate freight rail shipments.

S&S Shortline is a common carrier railroad with STB authority to operate from Cobre (MP 0) to McGill Junction (MP 128.5). S&S Shortline has interchange agreements with both UPRR and BNSF and has interchanged trains cars with UPRR and BNSF at Shafter. The White Pine Historical Railroad Foundation’s wholly-owned subsidiary, the Great Basin and Northern Railroad, has authority to operate and switching services from McGill Junction (MP 128.5) to Keystone (MP 146.5).

Fallon Branch
The UPRR’s Fallon Branch, which was once part of the SPTC, extends 16 miles from the Overland Route main line in Hazen southeast to Fallon. Freight shipments on the Fallon line consist primarily of calcium carbonate and magnesium oxide, which is shipped from Fallon to the main line in Hazen. Premier Magnesia ships the materials by truck three times per week from mines in Gabbs (Nye County) to Fallon, where it is transferred to rail cars at the facility in the Fallon Yard.

The maximum authorized speed is 10 mph (FRA Excepted Track) over 80-pound rail. The entire line is single-tracked and TWC-controlled. The Fallon Branch is part of UPPR’s Fallon subdivision within the Roseville service unit.

Churchill County has commissioned a study to consider options to relocate the Fallon line to an industrial park on the west side of town and abandon the seven-to-eight-mile segment from Trento Lane to Fallon.

Mina Branch
UPRR also owns and operates the Mina Branch, which was formerly part of the SPTC system. The line connects to the Overland Route main line in Hazen and extends 43 miles south to Fort Churchill near Wabuska. The Mina Branch primarily handles shipments of munitions and chemicals. The line also serves the Homestretch Geothermal Power Plant two miles north of Wabuska. The maximum authorized speed on the line is 25 mph (Track Class 2), and the rail consists of mostly 133-pound continuous welded rail. The Mina Branch is single-tracked and TWC-controlled. The Mina Branch is part of UPRR’s Mina subdivision within the Roseville service unit.

Thorne Branch
The Thorne Branch is the continuation of the Mina Branch south of Fort Churchill to the Hawthorne Army Depot. The federal government owns and operates this 53-mile-long branch line and uses it for classified military shipments. The maximum authorized speed on the single-track line is 10
G. Implementation Strategy for Passenger and Freight Rail

Capital Projects

Nevada’s largest markets, which have the potential to support passenger rail, are in the Reno area, which has passenger service on Amtrak’s California Zephyr (along with Elko and Winnemucca across northern Nevada), and Las Vegas in southern Nevada, which does not have passenger rail service today. The Reno passenger rail market is connected most directly with Salt Lake City to the east and Sacramento to the west. The Las Vegas passenger rail market could and eventually should be connected with the most proximate larger-market cities that surround it, notably, Salt Lake City, Phoenix, and Los Angeles. Connecting the state’s two largest passenger rail markets remains a long-term goal. Excursion rail projects can offer economic development opportunities.

UPRR dominates Nevada’s freight rail; BNSF also provides service for large parts of the state. Improving freight rail operational efficiency can increase more energy-efficient rail shipments, reducing highway truck requirements and air pollution, as well as improving on-time passenger rail performance. Rail-highway grade crossing improvements reduce crashes and fatalities.

The 2012 Nevada State Rail Plan calls for the state to assist in advancing a number of projects to address passenger rail, excursion rail, freight rail, and rail-highway grade crossings. The 2012 state rail plan projects are categorized as short, mid-, and long-term projects, based on when they may be implemented. These recommended projects are detailed in this document and summarized below as follows:

Short-term (0-5 years) Projects:

1. X-Train efforts
2. DesertXpress
3. UPRR Weso crossover improvements
4. Nevada Sub Sidings, Phase 1—Patrick and Rose Creek
5. Excursion rail extensions – Nevada Northern Railway, V&T Railroad, and Southern Nevada Railway
6. Annual rail-highway grade crossing program
Mid-term (6-20-years) Projects:
1. Developing consolidated intercity and intracity bus/rail terminals in Elko, Winnemucca, Sparks, Reno, Las Vegas, and Laughlin
2. Rail service for bid to host 2022 Winter Olympic Games, pending further study
3. UPRR Phase 2 improvements, involving Oreanna, Valery, and Massie sidings; Elko CTC; and California Donner Pass second track replacement and CTC upgrade
4. White Pine (Nevada Northern Railway) Shortline track upgrades
5. Fallon transload facility relocation
6. Northern and southern Nevada inland port projects

Long-term (20+ years) Projects:
1. WHSRA northern Nevada and Golden Triangle initiatives and NDOT multi-state multimodal framework study
2. Multimodal high speed rail transportation hub in Las Vegas area

NDOT is the lead on coordinating, prioritizing, and advancing the annual rail-highway grade crossing improvement program, in cooperation with NPUC and local participants, which is funded with FRA dollars and a UPRR match.

NDOT or a local entity, could take the lead on developing a future multimodal high speed rail transportation hub, affecting Clark County. NCED is the lead on the state’s inland port legislation, which calls for rail to be among the modes considered for any such site developed in Nevada. The other projects on the list involve third-party initiatives for passenger and freight rail improvements, from both the private and public sectors for passenger rail, or from local/county initiatives for rail projects.

NDOT can work to enhance its internal coordination for rail-related opportunities. For example, rail and road safety programs can include consideration of ITS possibilities to enhance intermodal operations, such as releasing a signal pre-emption to a nearby rail-highway grade crossing or sharing more system data to coordinate rail and highway activities. DesertXpress will be required to connect with Las Vegas’ FAST management center, according to the FHWA ROD for the high speed rail project.

NDOT should be involved in working to advance each of the projects recommended in the state rail plan. NDOT’s role should be to coordinate with other agencies of government and other states and the US DOT agencies, as well as the private sector to advance the projects. In

of right-of-way grant number NVN-4978. This agreement is made pursuant to the regulations in
Great Basin Transmission, LLC does hereby make application for approval of the above referred
Agreement Agreement
My name is James Garza, Director of the Community and Economic Development Office for White Pine County, Nevada. I am submitting these comments on behalf of our office in response to your request for comments regarding the I-11 and Intermountain West Corridor Study. I am in support of Alternative HH - NOT for the following reasons.

1. In identifying the shortest route from Mexico to Canada, US-93 is one of the only routes that are continuous from both borders and is the shortest route of all existing corridor routes today. It would need to be determined as to the existing Right of Way width currently available and in place compared to what width would be required to determine if additional ROW will need to be acquired from private landowners.

2. White Pine County has adopted the WPC Conservation, Recreation, and Development Act of 2006 which coordinates efforts with the White Pine Public Lands Bill that will make 45,000 acres available in White Pine for public auction within the next 17 years. This will open up opportunities for new private development that could be available to allow industrial and manufacturing industries to develop along the I-11 corridor. Only 23,000 acres have been identified, we still need to identify 22,000 acres, which could be developed along the new corridor alignment to allow public access to the ROW for development.

3. The Lincoln Public Lands Bill may have similar opportunities as well to develop new industrial and manufacturing facilities along I-11 corridor. I would reach out to Mike Baughman, Economic Development Consultant for Lincoln County 775-883-2051.

4. Two Right of Way grants have been issued by the Bureau of Land Management - Ely District Office, to NV Energy and LS Power to develop a 500 kV Power Line Energy Corridor. Although each applicant holds access rights to 200’ of width along the line between Harry Allen Substation (Las Vegas) and Shoshone, Idaho, it is my understanding the ROW was issued at a 0.75 to 0.5 of a mile wide. This Energy Corridor may allow I-11 an opportunity to apply to change a portion of the “purpose and need” to be able to consider utilizing a portion of the remaining width and reduce the amount of time required for environmental studies, NEPA costs, and administrative energy to start a ROW from scratch. No Tribal Land negotiations or private landowners purchases would be required if staying within the ROW currently in place. The northern corridor from Ely to Shoshone, Idaho may not develop a power transmission line and may be able to discuss changing the purpose and need altogether strictly for this purpose.

5. The Rural America Campaign launched by the Obama Administration in August 2011 addresses the need for American families to look toward rural communities to raise their families while taking advantage of the opportunities the rural areas host. This project needs to consider that iniative and look toward an Alternative that allows new develop of manufacturing opportunities and not focus on active and congested traffic patterns that will have limited open range lands to develop at costs outside of the budgets of new industries. Go to the link below for the White House Executive Order.

6. I-70 extends from Baltimore and travels westward through the center of the US and stops on the eastern side of Utah. If this corridor should ever continue into central California as forecasted, it would develop a cross section in Ely, Nevada. If I-11 were aligned to intersect through Ely, this may open the doors to continue the initiative behind I-70 to continue westward.

7. All Nevada western alternatives being considered will have much higher costs in land acquisitions, tribal agreements, and greater amount of materials to develop much longer arteries than just creating a path straight north from Las Vegas.

8. Snow birds from the north and tractor trailer traffic would have I-11 access from Idaho, straight into Las Vegas and Phoenix without having to route through congested traffic flows in Reno, Nevada or Salt Lake City, Utah to reach US-95 or I-15, coming from Seattle, WA., Spokane, WA., Boise, ID., or Helena, MT.. There are many folks that utilize US-93 now but improved lane widths would be much now welcoming to travel on.

9. Ely (White Pine County) and Wells (Elko County) have under utilized airports and industrial parks that have ample space available to develop new manufacturing facilities with improvements and incentives to welcome I-11 followers.

10. Rail currently exists along the US-93 corridor and is serviceable from Las Vegas to Caliente and then picks back up in Ely to Shafter (improvements will be required on southern section) that will allow access to UP and BNFS east-west rail ports. The Power Line ROW runs adjacent to the Nevada Northern Short-line rail from Ely to Shafter.

I-11 and Intermountain West Corridor Study
Public Meeting Comment Form
11. Ely, Nevada has power services provided by a Cooperative Utility Company (Mt. Wheeler Power) that are among the lowest power rates in the nation, 6.6 cents per kWh with qualification to manufactures. We also have ample water resources to support manufacturing industries to package with our low rates and streamlined permitting process to develop a property.

12. White Pine County has ample Tax Bond Credits to award to a Manufacturing facility to capitalize on utilizing the State Industrial Development Revenue Bonds to finance a development of a new facility from ground up.

Jim:

We have language related to the SWIP energy corridor in our Resource Management Plan:
"LR-34: Manage corridors in the RMP planning area as follows (see Map 12):...
"D. Designate the approved Southwest Intertie Project corridor at 0.75 mile wide from the Elko/White Pine County line to the point where it parallels Highway 93 and the Pahranagat Wildlife Refuge, and at 0.5 mile wide from that point to the Clark County line."

The actual ON-Line (SWIP) project EA was finalized in July 2008. The EA is available on line at http://www.wapa.gov/dsw/environment/SWIP.htm (number NV-040-07-048).

The purpose was "...to make a decision on the use of public land for electrical transmission facilities that are necessary to construct and operate the SWIP – Southern Portion, which requires amendment of the existing ROW grant...The ROW modifications evaluated in this EA are necessary for the construction and operation of the SWIP 500kV transmission line."

The West-Wide Energy Corridor (January 2009 programmatic EIS, which amended our RMP) defines energy corridors: Energy corridors may accommodate multiple pipelines (such as for oil, gas, or hydrogen), electricity transmission lines, and related infrastructure, such as access and maintenance roads, compressors, pumping stations, and other structures. The width of the corridor in this EIS is 3500 feet.

Based on our RMP, the SWIP EA, and the WWEC EIS, our quick-look assessment is that the work previously conducted would NOT be sufficient to adequately analyze the environmental impacts of a major highway within this ROW. It would be a different "purpose and need", and other alternatives would likely have to be developed and analyzed.

The current authorized ROWs are listed below:

2. N-49781 Northern Portion of SWIP - 431 mi long, 200 ft wide, also held by GB transmission - running from the Ely area north into Idaho.
3. N-85211 Middle Portion of SWIP - 30 mi long, 200 ft wide, also held by GB Transmission - it runs basically from the Gonder substation to the Cherry Creek area.

Note there is another ROW (N-82076) which is 236 mi long, 200 ft wide held by Sierra Pacific Power; currently "on hold" and not being developed.

Hope this information is helpful for you as you construct your comments.
